

any2.video

Every task is a video.

SERVICE DATASHEET

a Mustard Seed Solutions project

\$ cat what-it-is.md

We record real product walkthroughs. An AI operator performs one task on your actual product, in a clean environment, on camera. The result is checked against the product's own evidence, every attempt is logged, and the failures stay in the video. When you ship a release, the affected videos re-run.

\$ cat rates.tsv

Designed	6 tokens / min	\$6 / min
Motion-graphics explainer built on verified facts.		
Slide-Rendered	10 tokens / min	\$10 / min
Rendered from the run log, photos and the manual, narrated.		
Live Operation	15 tokens / min	\$15 / min
Screen recording of a real run, operated live on your product.		

1 token = \$1 · billed by token · tokens never expire

\$ cat add-ons.tsv

· Extra language track (captions + narration)	+2 / min
· Re-run on your next release	50% of the original
· Written guide + troubleshooting notes	included
· Vertical cut for social	included
· First sample (one product, one task)	free

\$ cat how-it-works.md

- 01 Brief** You send one product and one task in a sentence. We confirm scope, access and the environment in one reply.
- 02 Operate** An AI operator performs the task on the real product, in a clean environment, on camera. Every attempt is logged.
- 03 Verify** The video has to match what your product actually does. We use the product's own result as the proof.
- 04 Deliver** Video, written guide, captions in your languages, on your channel or ours. Releases trigger a re-run.

\$ ls ./deliverable

- + The video (MP4 + on YouTube, public or unlisted)
- + Written guide with the exact steps that worked
- + Troubleshooting notes: what failed first, and the fix
- + Captions and narration in the languages you asked for
- + Version tag, run date and verification record
- + Re-run on your next release
